L2: Entry 49 of 84   File: JPAB   Feb 4, 1994

DOCUMENT-IDENTIFIER: JP 06030125 A
TITLE: FACSIMILE MAIL SYSTEM

Abstract Text (2):
CONSTITUTION: A character recognition section 8 extracts a header, a voice
conversion section of a facsimile control unit(FCU) 7 converts the header into a
voice signal and sends the converted signal to a telephone line. That is, when
extraction of a mail addressed to a designated user from an application processor
(AP) 1 to a file processor(FP) 3 based on the system control is on request, an ESDI
controller 5 reads a relevant mail from a hard disk drive(HDD) 6, extracts the
header and sends it to the FCU 7. The header information in terms of character
codes is converted into a voice signal by an internal voice conversion section and
sent to a communication opposite party via a telephone line.

Application Date (1):
19920709
